

MANUAL STROBO FLASH LAMPS

- Connect the red wires together and lead them to the power source,
- Connect the black wires together and lead them to the ground source,
- To synchronize the lamps, connect all the white wires together,
- Only now you can turn on the power supply, otherwise the lamps will be blocked,
- To change patterns– connect yellow wires and put them for one second to black wire,

The lamp is intended for vehicles with 12/24V installation. Installation only in specialized workshops or in a professional service. Lamp must be installed only in accordance with UNECE regulations. Use as intended. The lamp has R10 approval - electromagnetic compatibility and R65 approval - authorizing the use of lamps on public roads. Mounting the lamp to the vehicle construction with 2 screws.

Important:

- do not touch the lamp while working or just after it is turned of. Lamp can be hot.
- if the base type require direct connection of the lamp with the instalation of the vehicle, the connection must be isolated with the heat shrink tube. It is necessary to avoid ingress of water to the core of the wires, which can cause the damage to the electrican and electrical components of the lamp,
- all interferences with the lamp or self-made changes (like depressurizing, intereference in electrical or electrical components, and similar) are strictly prohibited and it will cause the loss of warranty,
- the user of the vehicle need to be esspecially cautious when the wind occurs and in some situation can be forced to desist the drive.

Important! Do not look directly in the light. It can cause the the eye damage.
